SCLERBAN™ 75WDG

FUNGICIDE For Use on Potatoes

ACTIVE INGREDIENT	
2,6-Dichloro-4-nitroaniline	75% w/w
INERT INGREDIENTS	25% w/w
TOTAL	100% w/w

KEEP OUT OF REACH OF CHILDREN CAUTION—PRECAUCION

PRECAUCION AL USUARIO: Si usted no lee ingles, no use este producto hasta que la etiqueta haya sido explicada ampliamente.

EPA SLN Numbers: ID-900012, NV-890001,
OR-890007, WA-890017,
EPA EST. NO. 34704-NB-2
NET WEIGHT 30 POUNDS

SEE BELOW FOR ADDITIONAL PRECAUTIONARY STATEMENTS

06G91

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

HARMFUL IF SWALLOWED. AVOID INHALATION OF DUST OR SPRAY MIST. AVOID CONTACT WITH SKIN AND EYES.

STATEMENT OF PRACTICAL TREATMENT

IF ON SKIN: REMOVE CONTAMINATED CLOTHING AND WASH WITH SOAP AND WATER.

IF IN EYES: FLUSH WITH WATER. IF EYE IRRITATION PERSISTS, CALL A PHYSICIAN.

IF SWALLOWED: DRINK WARM WATER AND INDUCE VOMITING BY TOUCHING BACK OF THROAT WITH FINGER AND/OR BY ADMINISTERING SYRUP OF IPECAC. FOLLOW WITH MILK AND A MILD CATHARTIC (MILK OF MAGNESIA). CALL A PHYSICIAN OR POISON CONTROL CENTER IMMEDIATELY. NEVER GIVE FLUIDS OR INDUCE VOMITING IF PATIENT IS UNCONSCIOUS OR HAVING CONVULSIONS.

ENVIRONMENTAL HAZARDS

Toxic to fish. Do not apply directly to water or wetlands. Do not apply where runoff is likely to occur. Do not apply when weather conditions favor drift from areas treated. Do not contaminate water when disposing of equipment washwaters.

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Do not apply this product in such a manner as to directly or through drift expose workers or other persons. The area being treated must be vacated by unprotected persons.

REENTRY STATEMENT

Do not enter treated areas without protective clothing until sprays have dried. Because certain states may require more restrictive reentry interval for various crops treated with this product, consult your State Department of Agriculture for further information.

Written or oral warnings must be given to workers who are expected to be in a treated area or in an area about to be treated with this product. When oral warnings are given, warnings shall be in a language customarily understood by workers. Oral warnings must be given if there is reason to believe that written warnings cannot be understood by workers.

Written or oral warnings must include the following information:

CAUTION

(Insert area or field description) treated with SCLERBAN 75WDG on (insert date of application.) Do not enter treated areas without protective clothing until sprays have dried. In case of accidental exposure: Call a doctor (physician), clinic or hospital immediately. Explain that the victim has been exposed to SCLERBAN 75WDG and describe his condition. For further information, see the "Statement of Practical Treatment" portion of the pesticide label.

BAN 75WDG and miscible oil formulations of insecticides, particularly organic phosphorus compounds may cause plant injury.

POTATOES

Control of White Mold (*Sclerotinia sclerotiorum*), with SCLERBAN 75WDG.

For control of White mold (*Sclerotinia sclerotium*), use from 2 to 6 pounds of SCLERBAN 75WDG Fungicide per acre in the first application. Begin treatment when vines are within 6 to 8 inches from closing of rows just prior to layby. If disease persists, subsequent applications of 2 pounds per acre may be applied at 7 to 10 day intervals; do not exceed 10 pounds per season. Do not apply within 20 days of harvest. Do not feed treated potatoes to livestock.

APPLICATION WITH THE FOLLOWING EQUIPMENT:

1. Sprinkler Irrigation:
See "Application Through Sprinkler Irrigation Equipment (Potatoes)" below for specific instructions.
2. Ground Equipment: Use at least 100 gallons per acre of water.
3. Aerial Equipment: Use at least 10 gallons per acre as the minimum spray volume.

APPLICATION THROUGH SPRINKLER IRRIGATION EQUIPMENT (POTATOES)

Apply this product only through sprinkler including center pivot, solid-set, or portable (wheel move) irrigation systems.

Do not apply this product through any other type of irrigation system.

Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.

If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Do not apply when wind speed favors drift beyond the area intended for treatment.

CALIBRATION AND APPLICATION TECHNIQUES WHEN USING CENTER-PIVOT, SOLID-SET, OR PORTABLE (WHEEL MOVE) SPRINKLER IRRIGATION EQUIPMENT:

A. **Center-pivot Irrigation Equipment.** Operate system and injection equipment at normal pressures recommended by the manufacturer of injection equipment used. Fill tank of injection equipment with water. Operate system for one complete circle, measuring time required, amount of water injected, and acreage contained in circle. Mix recommended amount of SCLERBAN 75WDG Fungicide for acreage to be covered into same amount of water used during calibration and inject into system continuously for one revolution. Shut off injection equipment after one revolution, but continue to operate irrigation system until SCLERBAN 75WDG Fungicide has been cleared from last sprinkler head.

B. **Solid-set and Portable (wheel move) Irrigation Equipment.** Determine acreage covered by sprinkler. Fill tank of injection equipment with water and adjust flow to use contents over a 10 to 30 minute period. Mix desired amount of SCLERBAN 75WDG Fungicide for acreage to be covered into quantity of water used during calibration and operate entire system at normal pressures recommended by the manufacturer of injection equipment used for amount of time established during calibration. SCLERBAN 75WDG Fungicide should be injected at the end of the irrigation cycle or as a separate application. Stop injection equipment after treatment is completed and continue to operate irrigation system until SCLERBAN 75WDG Fungicide has been cleared from last sprinkler head.

DO NOT run irrigation system without safety valves or other devices to prevent back-siphoning of SCLERBAN 75WDG Fungicide into water source. Irrigation water treated with SCLERBAN 75WDG Fungicide should be maintained on the treated area until the water is absorbed into the soil. The tank containing SCLERBAN 75WDG Fungicide
